Art Unit: 2654

1. Applicant's correspondence filed on 15 February 2000 has been received and considered. Claims 1-28 are pending.

**Claims**

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-28 are rejected under 35 U.S.C. § 103 as being unpatentable over Kobayashi (Ref AR, Dynamic Soundscape).

As per claim 1, "information selection . . . represented by sounds" is taught by Kobayashi's browsing audio data, abstract:

"time-controlling a position of each sound independently, and selecting a sound" (suggested with his figures 1 and 2 which shows auditory space and that the user can select a new speaker where the user points);

"information associated with sounds" (taught with his topics, figure 1).

It is noted that Kobayashi does not use the terminology "time-controlling a position of each sound". However, this is interpreted in view of the applicant's disclosure, such as figure 3 which indicates that the topics of the applicant's invention are organized similarly to those of

Art Unit: 2654

Kobayashi's figure 1. The only difference seems to be that Kobayashi places the user inside the circle of sound while the applicant's point of reference is outside the circle. The difference is considered obvious because no unexpected results or advantage is apparent.

Claim 2: "controlling volume" is taught on page 194, bottom right column where intensity of the sounds reflects the distance to the cursor.

Claim 3: A circular arrangement is clearly shown in figures 1-2 on page 195.

Claim 4: Commanding a position change to go faster or to return is taught on page 3 with his fast and slow continuous motion, left column.

Claim 5: Selecting louder is taught on page 199, left column – as the user leans his/her head toward a Speaker, the louder the Speaker plays.

Claim 6: selecting a sound of interest is the focus of the entire paper. See, for example, page 199, right column.

Claims 7-8: Displaying images would be obvious in view of commonly implemented computer systems which typically include a display. Kobayashi indicates as much by referring to a digital notebook with visual cues on page 194, right column.

Claims 9-28 are rejected under similar arguments as presented above.

#### **Prior Art**

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Willchadson (6,327,567) is cited to show an example of audio browsing.

Rosenzweig (5,963,215) is cited to show an example of visual browsing.
